                                                                                                                                                                                                                                                                                                                                                                    The invention provides a nucleic acid encoding functional red fluorescent CC protein (II) that differs from the sequence of an Anthozoan red fluorescent protein by at least one amino acid substitution, and with different fluorescent properties. The red fluorescent protein of the invention can be expressed by standard recombinant methodology. (II) are used a fluorescent markers and FRET partners. It is used for identifying protein-protein interactions. (II) is also suitable for multiplexed fluorescent analysis and FRET-based applications using existing Aequorea fluorescent proteins. (II) has improved brightness, reduced spectral cross talk, and is rapidly and efficiently expressed in mammalian cells. The key mutations in the encoding nucleic acids provide improved folding, brightness, and create (II) with sharper, more defined excitation and emission peaks when expressed in mammalian cells. The present sequence represents the coding sequence of a Discosoma sp. drFP583 protein, an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for destabilising a target CC protein in a cell. The method comprises a linker moiety which operatively CC couples a target protein (a reporter moiety) to a linear multimerised CC destabilising domain, which is non-cleavable by a "NH-ubiquitin protein CC endoproteases. The method is useful for detecting an activity such as CC protease, protein kinase or phosphorycein phosphatase activity such as CC also useful for developing movel assays for a wide range of post-CC translational activities, such as proteolysis, phosphorylation, CC dephosphorylation, glycosylation, methylation, sulfation, prenylation, CC dephosphorylation and ADD-ribosylation within cells. The CC recombinant DNA molecule of the invention is useful for creating CC improved disease resistance or other favourable traits. The present CC sequence is Discosoma sp. "red" anthozoa fluorescent protein, dsf7843 CC cDNA which is a natural fluorescent protein used as a reporter moiety in the exemplification of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                          CThe patent discloses optical methods and compositions for determining CC transmembrane potential across biological membranes in living cells. The CC method of determining the electrical potential across a membrane in a CC method of determining the electrical potential across a membrane in a CC biological system comprises introduction of two reagents, a first reagent CC comprising a hydrophobic fluorescent ion capable of redistributing from a CC first face of the membrane to a second face of the membrane in response CC face or the second face of the membrane in response CC capable of undergoing energy transfer by either donating or accepting CC excited state energy to the fluorescent ion. The membrane is then exposed CC capable of undergoing energy transfer between the reagents is CC measured and related to the membrane potential. The method is useful for CC detecting changes in membrane potential in subcellular organism of test CC membranes in biological systems. The method is used for screening of test CC memicals for activity to modulate the activity of target ion channel. CC reagent that comprises a charged hydrophobic fluorescent molecule and a second reagent comprising a bioluminescent or naturally fluorescent control of the present sequence is Discosoma species (red) DNA encoding an CA protein. The present sequence is Discosoma species (red) DNA encoding an comprising a first control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transmembrane potential; biological membrane; test chemical screening; Anthozoa fluorescent transgenic organism; drFP583 protein; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (YRFP). (I) are used to express red fluorescent protein (RFP) in elekaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New DNA encoding red fluorescent protein, useful as marker in biotechnology, has sequence optimized for expression in eukar especially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
The invention relates to DNA (I) containing either sequence ABA95905 of sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (yRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern
                                                                                                                                      New DNA encoding red fluorescent protein, useful as marker in biotechnology, has sequence optimized for expression in eukaryotes, especially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                             Yeast; red fluorescent protein; RFP; plant; transgenic; GFP; Saccharomyces cerevisiae; Nicotiana tabacum; Arabidopsis thaliana Escherichia coli; green fluorescent protein; biotechnology; gene;

                                                                                                                                                                                                                                                                                                                                         The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (YRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis chaliana and also in protaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate Diotection limit and gives a better signal-to-noise ratio. The present sequence is that of a polynucleotide encoding the yeast optimised RFP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New DNA encoding red fluorescent protein, useful as marker biotechnology, has sequence optimized for expression in eulespecially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Yeast; red fluorescent protein; RFP; plant; transgenic; GFP; Saccharomyces cerevisiae; Nicotiana tabacum; Arabidopsis thaliana; Escherichia coli; green fluorescent protein; biotechnology; gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
The invention relates to DNA (I) containing either sequence ABA95905 sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (yRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum
                                                                                                                                                                                                                                                      New DNA encoding red fluorescent protein, biotechnology, has sequence optimized for especially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Yeast; red fluorescent protein; RFP; plant; transgenic; GFP; Saccharomyces cerevisiae; Nicotiana tabacum; Arabidopsis thaliana; Escherichia coli; green fluorescent protein; biotechnology; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of an RNA sequence corresponding to the yeast optimised RFP encoding cDNA given as SEQ ID NO 1 (ABA95905)

                                                                                                                                                                                                                                                              The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is DNA encoding Discosoma sp. drFP583 (NFP-6) wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid encoding a non-aggregating chromo- or fluorescent mutant of an aggregating Chidarian chromo- or fluorescent protein or mutant for analyte detection assays or fluorescence activated cell sorting
